Task: Schedule build jobs in Jenkins using POLL SCM and Build Periodically

Step 1: Open Your Job in Jenkins

1. Go to **Jenkins Dashboard**
2. Click on your **Project/Job**
3. Click **Configure**

Step 2: Give git link at git option (Source code management)

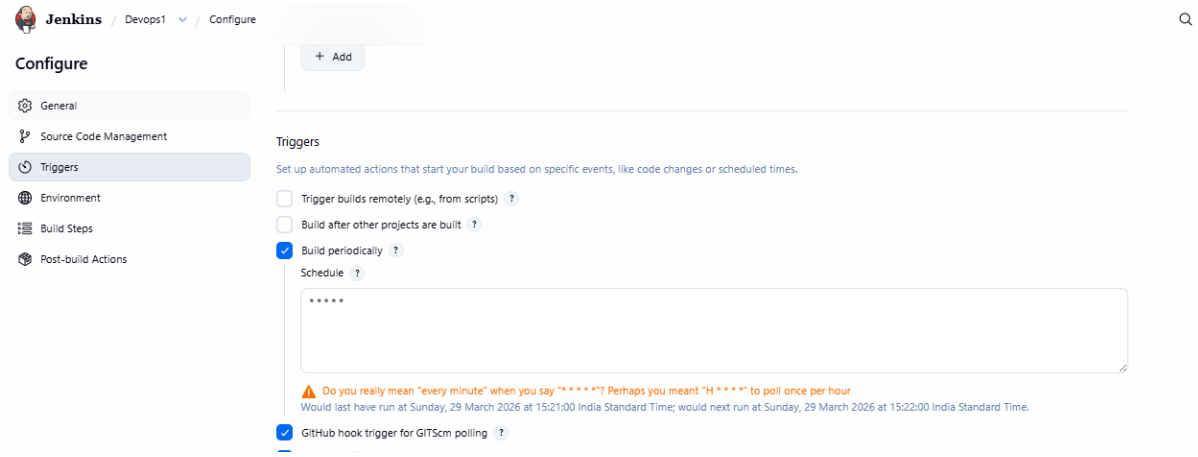

Step 3: Triggers – give the build periodically and POLL SCM (Source Code Management)

Build Periodically (Time-based scheduling)

This runs the job at fixed time intervals.

Scroll to Build Triggers
Check ☑ Build periodically
In the Schedule box, enter a cron expression

Example:
H/5 * * * * (Runs every 5 minutes)

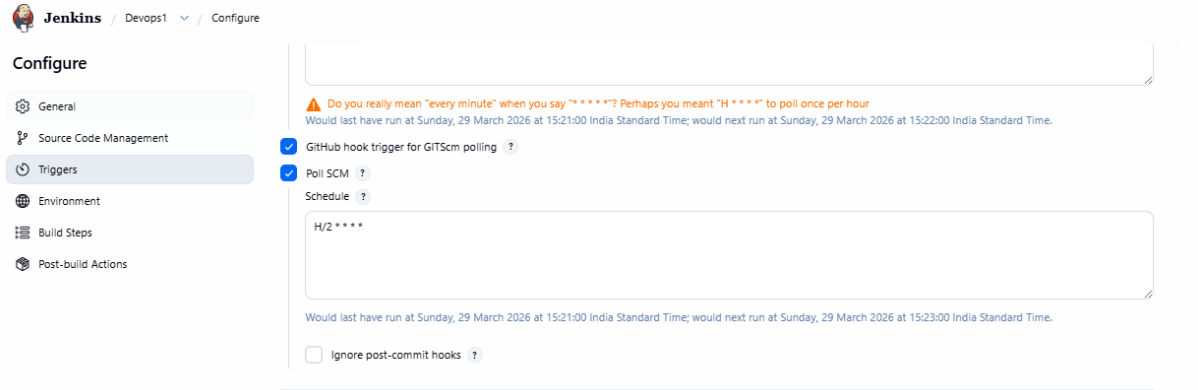

0 9 * * * (Runs every day at 9 AM)

Then POLL SCM (Check Git changes)

This checks your repository for changes and triggers a build only if changes are found.

Check ☑ Poll SCM

Enter cron expression

Example:

H/2 * * * * (Checks Git repo every 2 minutes)

Builds only if changes are detected
